

Quality of Product Matters

The purpose of this document is to provide consumers with the questions they should be asking their cannabinoid producers/supplier regarding quality and consistency of product.

How many milligrams of active cannabinoids (CBD, THC, THC-A, etc.) does the product contain?

What is the total volume (milliliters) of the product?

Those may be better described as: How many milligrams are in a milliliter (mg/ml)?

Is the product tested for the following:

- Identity
- Potency (Cannabinoid Profile)
- Heavy Metals:
 - Inorganic Arsenic
 - Cadmium
 - Lead
 - Methyl Mercury
- Residual Solvents
- Aflatoxins
- Microbial Contaminants:
 - Aerobic Plate Count
 - Yeast and Molds
 - Coliforms
 - Salmonella spp
 - Escherichia coli

Where is the product grown? In the U.S.? What country?

Is it certified as hemp? By whom?

Is it grown naturally using organic processes?

Can you track production of the product from seed to delivery?

Is it produced in a registered lab?

Are they following (c)GMP standards?

Are they following the AHPA guidelines? (American Herbal Products Association)

Is there a refund policy?

What is cost per milligram? Is there financial assistance?

Will there be a consistent supply, or will I run out?

Is there good customer service?

Who will help me with my questions regarding the product?
